Answers to Questions provided by
E-The Environmental Magazine

What is solar desalination?

EarthTalk: What exactly is solar desalination and how can it help an increasingly thirsty world? —Maryann Dell'Amore, Howard, MN

Solar desalination is a technique used to remove salt from water via a specially designed still that uses solar energy to boil seawater and capture the resulting steam, which is in turn cooled and condensed into pristine freshwater. Salt and other impurities are left behind in the still.

Less than one percent of the world's desalination is powered by renewable energy sources today, but that could all change soon if companies like California-based WaterFX have anything to say about it. Its Aqua4 "concentrated solar still" (CSS) uses a concentrated solar thermal collector to compress heat, create steam and distill water at 30 times the efficiency of natural evaporation. It can produce 65,000 gallons of freshwater per day—and it can desalinate a wide range of water sources, not just seawater.

To wit, the company will start employing solar desalination to treat some 1.6 billion gallons of salt-laden irrigation drainage from California's drought-stricken, agriculturally-rich Central Valley next year. Crops extract nearly pure water from soil, leaving behind salt and other potentially toxic minerals like selenium that naturally occur in the water. These excess minerals must be drained from the soil, or crop productivity

plunges. By treating this drainage, WaterFX can prevent about 15 percent of farmland in California from being retired every year to make room for storage for untreated drainage water. It will also prevent the drainage from contaminating fresh waterways and endangering wildlife. According to California's State Water Resources Control Board, approximately 9,493 miles of rivers and streams and some 513,130 acres of lakes and reservoirs are listed as being impaired by irrigated agricultural water.

"If we don't start removing the salts now, at least 10 percent of all current farmland in production in California will have to be retired, and in many scenarios this number could be up to 30 to 40 percent, especially on the west side of the Valley where the salinity is very high," says WaterFX's Matthew Stuber. "Water in the drainage areas will contaminate groundwater and natural surface waterways at an accelerated pace, eventually polluting sources of drinking water and the natural environment. Once that is released into the environment, you severely damage the natural habitat and wildlife."

Another large-scale solar desalination project is currently under construction in Saudi Arabia and scheduled for completion in early 2017. The plant is slated to produce 60,000 cubic meters of water per day for Al Khafji City in North East-

Case No.: 15 JA 38 Division 305

NOTICE OF HEARING

In the Matter of the Petition of: RENEE and JORGE GARCIA For the Adoption of a Child.

To: ASHLEY ESQUIBEL

Pursuant to §19-5-208, C.R.S., you are hereby notified that the above-named Petitioners have filed in this Court a verified Petition seeking to adopt a child.

If applicable, an Affidavit of Abandonment has been filed alleging that you have abandoned the child for a period of one year or more and/or have failed without cause to provide reasonable support for the child for one year or more.

You are further notified that an Adoption hearing is set on **November 24, 2015, at 1:15 p.m.** in the court location identified above.

You are further notified that if you fail to appear for said hearing, the Court may terminate your parental rights and grant the adoption as sought by the Petitioners.

I certify that on September 2, 2015, I mailed a copy of this Notice of Hearing and Petition for Adoption to Petitioners' Attorney.

ern Saudi Arabia, ensuring a constant water supply to the arid region throughout the year. According to Abengoa, the Spanish renewable energy company building the pioneering facility, the incorporation of solar would significantly reduce operating costs, as Saudi Arabia currently burns 1.5 million barrels of oil per day at its desalination plants, which provide 50-70 percent of its drinking water. Total desalination demand in Saudi Arabia and neighboring countries is expected to reach 110 million cubic meters a day by 2030.

With freshwater supplies at a premium already in many parts of the world as a result of climate change, there has never been a better time for solar desalination to come of age.

Dear EarthTalk: What is biophilic design in architecture and where can I see it implemented?—Winston Black, Newark, NJ

Biophilia is defined as the inherent human inclination to affiliate with nature. The moral imperative of biophilia is that we cannot flourish as individuals or as a species without a compassionate and considerate relationship to the world beyond ourselves of which we are a part.

The Office of the Pueblo County Public Trustee

Biophilic design, an extension of biophilia, incorporates natural materials, natural light, vegetation, nature views and other experiences of the natural world into the modern built environment.

According to Stephen R. Kellert, author of BIRTHRIGHT: PEOPLE AND NATURE IN THE MODERN WORLD, humans may have evolved in the natural world, but the habitat of contemporary people has largely become the indoor built environment where we now spend 90 percent of our time. The result has been an increasing disconnect between us and nature.

However, the emerging concept of biophilic design recognizes how much human physical and mental well-being relies on the quality of our relationships to the natural world.

"We put people in windowless offices and give them a computer and a desk and think they should be able to work just fine because they've got all the obvious things they need, like air to breathe, artificial light to see by and access to all kinds of information," Kellert says. "But we find that they don't actually work all that well in those kinds of environments. They are more

likely to experience fatigue, lack of motivation and higher rates of absenteeism.

“If you just put certain aspects of nature into these environments, it actually results in improved well-being and productivity.”

Current low-impact design, like the U.S. Green Building Council’s Leadership in Energy and Environmental Design (LEED) system, emphasizes avoiding pollution, eliminating chemical toxins, minimizing waste, increasing energy efficiency and decreasing water use.

However, due to rapidly evolving technological advances, energy-efficient solar collectors and other low-impact design features quickly become outdated. Biophilic design’s aesthetic, sensory-rich fusion with nature, along with its health benefits, make it the missing link in most sustainable design, Kellert says, and only development which incorporates both biophilic and low-impact design can achieve true and lasting sustainability.

“You need to create a sense of affiliation or attachment to these structures that motivates people to want to sustain them over time, which is just as important as reducing harmful impacts,” Kellert adds. “We’ve done ourselves in the environmental field a disservice [by] only focusing on the negative impacts and forgetting the root of the environmental movement, which, whether it’s Henry David Thoreau or Ralph Waldo Emerson or Aldo Leopold, was very much a celebration of our connection to the natural world and how it’s fundamen-

tal to who we are as individuals and as a species.”

Recent biophilic design can be seen in structures like Yale University’s Kroon Hall, the Bank of America Tower and the Cook+Fox Architects office in New York City, Dell Children’s Hospital in Austin, Texas, and elsewhere. Kellert says one of the most satisfying projects he worked on last year was an elderly health care complex in Indiana. By incorporating biophilic design into the complex, it created a less alienating, more positive, therapeutic environment for people with memory loss.

Biophilic design

Cook+Fox Architects’ Office Cook+Fox Architects’ office in New York City incorporates many of the attributes of biophilic design referenced by Stephen R. Kellert.
